

Cerby Case Study: Marketing Operations & SEO Partnership

"The Agency 42 team is always quick to respond and ready to help with anything we need in marketing ops. Their expertise and strategic guidance have been essential as we build and refine our SEO & MOPS foundation." – Bora Repishti, VP of Marketing @ Cerby

Client Overview & Challenges

About Cerby

Cerby is a security automation platform helping enterprises manage nonstandard and unmanageable applications. Cerby empowers teams to operate securely without compromising on autonomy or access.

The Challenge

As a fast-moving security startup, Cerby needed to operationalize their marketing systems while preparing for aggressive growth. Their HubSpot instance had accumulated inconsistent data, missing campaign tracking, and lacked connection to Salesforce.

The marketing team was also launching campaigns across multiple channels and needed faster, more reliable support for campaign setup, reporting, and SEO content development — without pulling in engineering or product teams.

1

HubSpot + Salesforce Integration

Connecting critical marketing and sales platforms for seamless data flow

2

Campaign Operations

Managing campaign setup, execution and tracking across channels

3

Attribution Setup

Creating clear visibility into marketing impact throughout the funnel

4

Reporting

Building dashboards and metrics to track performance

1

Workflow Automation

Streamlining processes to increase efficiency and consistency

2

Data Hygiene

Cleaning and maintaining database quality

3

SEO Strategy & Content Briefs

Developing organic visibility and content frameworks

42's Approach

42 embedded with the Cerby team as their **Marketing Operations partner**. Our goal was to establish a scalable and clean marketing foundation that could support campaign execution, attribution, and reporting.

We started with a full audit of Cerby's **HubSpot instance** — identifying key gaps in data structure, lifecycle workflows, campaign setup, and integration points. From there, we:

Salesforce–HubSpot Integration

Implemented the Salesforce<>HubSpot sync, mapping lifecycle stages and custom fields

Campaign Tracking Framework

Created a custom campaign tracking framework using the HubSpot campaign object

Lead Lifecycle Workflow

Built a single lead lifecycle workflow to manage lead status across scoring, sales activity, and manual updates

Attribution Reports

Designed and launched attribution reports to help the team understand impact across the funnel

Campaign & Operational Support

In parallel, we provided day-to-day execution support — managing and closing over **120 marketing ops tickets** in two quarters. This included:

- Building lists and email workflows
- Creating custom properties
- Merging duplicates and resolving sync errors
- Developing dashboards for performance reporting
- Supporting ad hoc campaign launches and tracking setup

SEO Strategy & Content

To help Cerby increase organic visibility, we also delivered a **technical SEO audit**, conducted **keyword research**, and produced **10 SEO content briefs** aligned with core product and awareness themes.

Results

Our partnership with Cerby delivered both speed and structure — helping the team move quickly while cleaning up the foundation underneath.

120+

Marketing Ops Tickets

HubSpot tickets closed over two quarters

10

SEO Content Briefs

Created for top-of-funnel growth

"The Agency 42 team is always quick to respond and ready to help with anything we need in marketing ops. Their expertise and strategic guidance have been essential as we build and refine our SEO & MOPS foundation."

– Bora Repishti, VP of Marketing @ Cerby

Salesforce Integration

Salesforce<>HubSpot integration live with mapped fields and sync rules

Campaign Architecture

Campaign process documented and live for faster execution
