The Network Automation Market

A snapshot of paid media demand signals for infrastructure orchestration. Prepared February 2026.

Opportunity Snapshot

The network automation category shows strong buying intent with 3,000+ monthly searches across core terms. Branded search ("itential") indicates 1,300/mo in direct demand — but category terms like "network automation" and "network configuration management" are where your competitors are capturing undecided buyers. The CPCs ($16-26) signal high-value B2B buyers.

Full Campaign Plan Deliverables

Google Ads Strategy

- 50+ researched keywords with CPCs and competition data
- Campaign structure with naming conventions
- Ad group organization by intent level (branded, category, competitor)
- RSA headlines and descriptions (ready to deploy)
- Negative keyword recommendations for B2B focus

LinkedIn Strategy

- Full audience targeting specs (titles, functions, seniorities)
- Vertical-specific targeting (Telecom, Financial Services, Healthcare)
- TOFU/MOFU/BOFU campaign structure
- Ad creative concepts and copy
- Retargeting + ABM integration strategy

Budget & Measurement

- Channel allocation recommendations (Google vs LinkedIn)
- Expected outcomes by spend level
- KPI targets and benchmarks for infrastructure software
- 90-day optimization roadmap

Why This Matters Now

The "agentic infrastructure" positioning is early. Search volume for AI-related infrastructure terms is still forming. This is a category creation opportunity — the companies that invest in demand gen now will own the narrative as enterprises start actively searching. Your competitors are bidding on "network automation" but nobody owns "agentic orchestration" yet.

A Director of Demand Gen coming into this market has a real greenfield opportunity — but needs supporting firepower to move fast while they learn the landscape.

Let's Talk Strategy

We've built demand gen engines for B2B infrastructure companies. Happy to share what works.
